Average Energy Prices, Washington-Baltimore – February 2017

Gasoline prices averaged \$2.337 a gallon in the Washington-Baltimore area in February 2017, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Sheila Watkins noted that area gasoline prices were up 27.3 percent compared to last February when they averaged \$1.836 per gallon. Washington area households paid an average of 13.0 cents per kilowatt hour (kWh) of electricity in February 2017, down 3.7 percent compared to the 13.5 cents per kWh in February 2016. The average price of utility (piped) gas at \$1.205 per therm in February 2017 was up 25.5 percent from \$0.960 per therm a year earlier. (Data in this release are not seasonally adjusted; accordingly, over-the-year-analysis is used throughout.)

At \$2.337 a gallon, Washington area consumers paid close to the national average of \$2.360 for a gallon of gasoline in February 2017. Last February, gasoline prices in Washington were also close to the national average. From 2013 to 2015, prices for a gallon of gasoline in Washington differed from the U.S. average by less than 1.6 percent in February. (See [chart 1](#) and [table 1](#).)

The Consumer Price Index for March 2017 is scheduled to be released on Friday, April 14, 2017, at 8:30 a.m. (ET).

Technical Note

Average prices are estimated from Consumer Price Index (CPI) data for selected commodity series to support the research and analytic needs of CPI data users. Average prices for electricity, utility (piped) gas, and gasoline are published monthly for the U.S. city average, the 4 regions, the 3 population size classes, 10 region/size-class cross-classifications, and the 14 largest local index areas. For electricity, average prices per kilowatt-hour (kWh) are published. For utility (piped) gas, average prices per therm are published. For gasoline, the average price per gallon is published. Average prices for commonly available grades of gasoline are published as well as the average price across all grades.

All eligible prices are converted to a price per normalized quantity. These prices are then used to estimate a price for a defined fixed quantity. The average price per kilowatt-hour represents the total bill divided by the kilowatt-hour usage. The total bill is the sum of all items applicable to all consumers appearing on an electricity bill including, but not limited to, variable rates per kWh, fixed costs, taxes, surcharges, and credits. This calculation also applies to the average price per therm for utility (piped) gas.
